ANNOTATION. *The article describes the importance of educating a harmoniously developed personality in society, explaining to the new generation important tasks such as strengthening independence, valuing and protecting a peaceful and peaceful life, being vigilant. It describes measures to protect young people from various ideological threats, outlines the problems of increasing the level of coverage of the population with higher education, regular and systematic work on training, education and spiritual propaganda using advanced methods.*

Keywords: *mass culture, relevance, spiritual and educational events, radical reform, pedagogical and psychological diagnostics, spirituality, art, enlightenment, unique experience, regular and systematic work.*

How do our youth live in the modern world? What values are important to her? These questions are relevant for us today precisely because the honest answer to them depends on how the current generation of our children will grow up.

There are many temptations in the modern world - this is mass culture, which sometimes imposes a certain way of life on us, and many religious sects that promise eternal bliss to their followers, and religious fanaticism, which calls for sacrificing one's life for the sake of returning to the origins of Islam and a righteous life [1,2,3,4,5,6,7,8,9].

Today, the upbringing of a harmoniously developed personality primarily depends on how spiritual and educational work is carried out in general education schools, what is being done to achieve its effectiveness. The most important tasks for us are to strengthen independence, to value and protect a peaceful and peaceful life, to be vigilant, to protect young people from various ideological threats. This places a great responsibility on parents, teachers and mentors, the general public, including propagandists of spirituality.

Under the leadership of President Shavkat Mirziyoyev, large-scale work is being carried out in our country to radically reform the spiritual and educational sphere, preserve and develop national values, and protect young people from negative ideological influences. The decree of the head of our state "On approval of the Concept of development of the higher education system of the Republic of Uzbekistan until 2030" serves as an important guide to action in raising the relevant work to a qualitatively new level. According to the decree, the Concept of development of the higher education system of the Republic of Uzbekistan until 2030 has been approved, providing for the development of public-private partnership in the field of higher education, increasing the level of higher education coverage by more than 50 percent based on the organization of state and non-state higher educational institutions in the regions, creating a healthy competitive environment in the field [8,9,10,11,12,13].

The decree also describes the creation of techno parks, foresight centers, transfer technology centers, startups and accelerators in higher educational institutions by widely attracting foreign

investment, expanding the scale of paid services and other extra-budgetary funds, bringing them to the level of scientific and practical institutions for forecasting and researching the socio-economic development of relevant industries, spheres and regions, increasing the level of coverage of higher education for social protection strata of the population, including persons with disabilities, with the improvement of infrastructure conditions for them.

Shavkat Mirziyoyev's book "The Strategy of New Uzbekistan" serves as an important guide to action in raising the relevant work to a qualitatively new level, and it also reveals the essence and meaning of the basic concepts and principles of this direction, identifies urgent tasks to protect the younger generation from the effects of negative phenomena and ideas. The book tells about the goals, essence and priority directions of fundamental transformations and reforms on the way to creating the foundation of the New Uzbekistan and the Third Renaissance, as well as the prospects for national development.

In the current difficult time, in order to enrich the spiritual world of young people, it is necessary to introduce regular and systematic work on training, education and spiritual propaganda using advanced methods, in accordance with the requirements of the time [14,15,16,17,18,19,20,21].

The current stage of social development in Uzbekistan is characterized by the increasing and strengthening of the role of youth in all spheres of life: economy, politics, spirituality. Special attention is paid to studying and bringing to the public the rich spiritual heritage of our great thinkers such as

Al-Khorezmi, Abu Rayhon Beruni, Al-Farabi, Ibn Sina, Amir Temur, Mirzo Ulugbek, Alisher Navoi, Zahiriddin Muhammad Babur and many others form a powerful layer of spiritual and educational ideas in the history and culture of Uzbekistan. As a priority, the task of improving the activities of institutions of spirituality, art and enlightenment, libraries, information and resource centers, educational institutions based on the requirements of the time, strengthening their educational significance is being solved.¹

Under the leadership of President Shavkat Mirziyoyev, special attention is paid to studying the life and work of great people, bringing to the consciousness of the population, especially the younger generation, the essence and meaning of works imbued with the ideas of humanism.

Another proof of paying special attention to education is the decree and decree of the President of the Republic of Uzbekistan dated November 6, 2020 "On measures for the development of education and upbringing, and science in the new period of development of Uzbekistan" N UP-6108 and "On additional measures to further improve the education and upbringing system" N PP-4884, where it is noted that in recent years, systematic work has been carried out in the country to improve the quality and efficiency of the education and upbringing system, the formation of modern knowledge and skills among kindergarten pupils, students and students, to ensure mutual close cooperation and integration of education systems and the sphere of science, continuity and continuity of education.

Along with this, the current state of the national education and upbringing system requires the implementation of consistent measures to modernize it based on modern requirements, educating young people as spiritually rich and physically developed individuals with high knowledge and spirituality, increasing the authority of managers and teachers of educational institutions, creating the conditions necessary for them to carry out effective activities. In order to improve the spheres of education, upbringing and science of the country, further increase respect for teachers and teaching staff, scientific and creative intelligentsia in society, develop professional skills of students, as well as expand participation in the education system of the private sector.

The Decree describes that the main directions of further development of the sphere of education and upbringing, and science in the new period of development of Uzbekistan include:

- training of a new generation of personnel with high intellectual and spiritual potential, able to enter the arena, implement their new initiatives and ideas for the sake of the country's progress, as well as the formation of skills and knowledge necessary for graduates of educational institutions to master modern professions;
- organization of a national education system capable of withstanding today's fierce competition at the global level, improvement of textbooks and teaching aids based on modern requirements, creation of a new generation of textbooks and teaching aids, optimization of curricula and standards;
- increasing the role and authority of managers, teachers and mentors, teachers and teachers, professors-teachers of educational institutions, as well as representatives of the field of science in society, worthy respect for their hard work and financial incentives, depending on the effectiveness of their activities;
- creating the conditions necessary to improve the professional skills and effectiveness of teaching staff on a permanent basis, improving the system of professional development based on the principle of "education during life";
- expansion of the share of the private sector in the provision of research and educational services, the formation of a competitive environment through the creation of non-governmental educational organizations in the regions, the development of public-private partnerships in the field of education;
- automation of education management and creation of a comprehensive analysis system using modern information and communication technologies, further development of electronic resources and distance education, popularization of IT professions among students;
- turning science into the main driving force of the economy, expanding the scale of scientific research, stimulating the innovative activity of young talented scientists, further strengthening and developing the potential of existing scientific organizations;²

The Decree pays attention to the creation of centers for socio-psychological support of children without the status of a legal entity on the basis of sectors for the organization of pedagogical and psychological diagnostic activities of district (city) departments of public education within the established states, the protection of psychological health of students, ensuring their sustainable social and intellectual development, rehabilitation of adolescents, prevention of various forms of violence, early identifying students who are suicidal and providing them with social and psychological assistance, etc.

Today, a deep interpretation of such concepts as sincerity, love, honor, morality, patience, generosity, loyalty is so important, they talk about the need to honor parents, the Motherland, calling on a person to leave behind an honest name, decorate life with noble deeds and good deeds. Meetings, educational events with the participation of famous writers, cultural and artistic figures serve to develop the worldview of boys and girls. In order to improve the quality of education, great importance is attached to the widespread use of modern information and communication technologies, the general education information network "ZiyoNET". The Center for the Development of Multimedia General Education Programs under the Ministry of Public Education of the Republic of Uzbekistan, in cooperation with the Republican Educational Center and specialized enterprises for the production of software products, has created many electronic textbooks.

They contribute to the enrichment of the content of training sessions, the introduction of advanced pedagogical technologies into practice, and the exchange of experience.

However, in our age of globalization, many informational attempts are being made via the Internet under the guise of "mass culture" to introduce ideas alien to our national interests, ideology, moral and spiritual values into the minds of young people. This, in turn, requires increased responsibility for the education of young people, the proper organization of students' free time and strengthening professional orientation in accordance with the interests and abilities of young people.

A number of laws, decrees and resolutions adopted in our country, as well as social programs guarantee the protection of the rights of the younger generation and its interests. Modern schools, colleges and lyceums, higher educational institutions, scientific centers of our country, equipped with the latest educational equipment, computer technology, contribute to the education of young people at the level of world standards, obtaining a profession of interest, conducting scientific and innovative searches. Much attention is paid in our country to the prevention of offenses. As the popular wisdom says: it is better to prevent the disease than to treat it. Our country has accumulated a unique experience in preventing offenses, improving the situation in society through preventive measures.[23,24,25]

We have set a goal and priority tasks for the formation of the young generation with comprehensively healthy, harmoniously developed personalities. Timely implementation of these measures places a special responsibility on teachers. All levels of education, including vocational schools, play an important role in the upbringing of a sane, spiritually developed young generation. In particular, the priority task is to fully cover school graduates with institutions of secondary special education, ensuring full employment of those entering independent life
